Fullstackmodiji

AI Job Search Automation Playbook: The Giveaway Guide

What is inside

- **The full process**, from resume to interview calendar, in five steps.
- **Five copy-paste prompts**: the master resume builder, the LinkedIn and Naukri connection tests, the overnight job hunter, and the morning triage.
- **One image prompt**: a professional headshot for your LinkedIn and Naukri profiles.
- **One video prompt**: a 30-second personal intro video for your profile.
- **Verified official links** for every tool and help page mentioned, listed again in the Sources section at the end.
- **A safe-use checklist**, so automation helps your job search instead of hurting it.

A note on results

In the video, one overnight run produced about 27 interview calls and emails. That is one person's result, from one profile, in one job market. Your numbers depend on your skills, experience, target roles, city and salary range. Treat the headline numbers in the video (50, 500, 3,000 calls) as the upper end of what people hope for, not a promise. What this system reliably gives you is speed, consistency and zero busywork, which raises your odds.

How to read this guide

Work top to bottom. Each step ends with a short check so you know it worked before moving on. Text in square brackets, like [Your Name], is a placeholder you replace with your own details. Total setup time is roughly 60 to 90 minutes, once.

What you need before you start

You need four accounts and one browser extension. Every link below was opened or confirmed through search before it went into this guide.

Tool	What it does in this system	Cost	Official link
Claude	The AI that writes your resume and runs the job hunt	Claude in Chrome needs a paid plan (Pro or above)	claude.ai
Claude in Chrome	Lets Claude read, click and navigate sites like LinkedIn and Naukri in your own browser	Included with paid plans	Getting started guide · Chrome Web Store

Tool	What it does in this system	Cost	Official link
LinkedIn	Jobs, Easy Apply, job alerts, recruiter messages	Free	LinkedIn jobs help · Job alerts help
Naukri.com	India's main job portal, profile and resume database	Free to create a profile	Create your Naukri profile (FAQ)
Gmail, Calendar, Drive	Where interview emails land and where Claude tracks them	Free	Google Workspace connectors for Claude

Why Claude in Chrome is the key piece

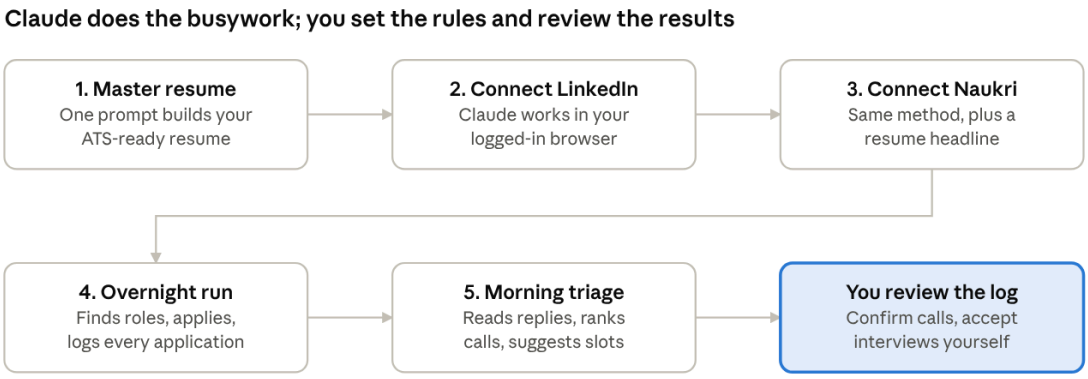

LinkedIn and Naukri do not have a one-click "connect to Claude" button. The trick in the video works because Claude in Chrome operates the real websites inside your own logged-in browser, the way you would. Per Anthropic, it is a browser extension that lets Claude read, click and navigate websites alongside you, and it works through the side panel in Chrome. Because it acts with your accounts, read Use Claude in Chrome safely before you begin.

Quick setup checklist

- ☐ Claude account on a paid plan, signed in at claude.ai
- ☐ Claude in Chrome installed, with the icon visible in your Chrome toolbar
- ☐ LinkedIn account with a profile photo and your current job title
- ☐ Naukri account with phone and email verified
- ☐ Gmail and Google Calendar connected to Claude (Customize, then Connectors)
- ☐ A folder called "Job Search" in Google Drive for your resumes and tracker

How the system works

The whole system is five steps, and you only decide at the start and the end. You do steps 1 to 3 once. Steps 4 and 5 repeat every night and every morning.

job-search automation · 5 steps plus your review

Read the picture left to right, then along the bottom row. Claude writes your resume, then operates LinkedIn and Naukri through your own browser. At night it applies to matching roles and keeps a log. In the morning it reads your inbox, ranks the replies and suggests interview slots. You stay in charge of what is sent and which interviews you accept.

The one idea that makes it work

A good prompt gives Claude four things: **who you are** (your resume), **what you want** (role, city, salary range), **rules it must follow** (never lie, skip jobs outside your range) and **where to report** (a log and a morning summary). The prompts in the next sections are built on exactly this structure.

Step 1: The master resume prompt

Your resume is the foundation. Every application the AI sends later is built from it, so spend ten minutes here. The prompt below makes Claude interview you, then write a resume that passes applicant tracking systems (ATS) and reads well to a human recruiter.

Before you paste the prompt

Gather these in one place: your current resume or LinkedIn "About" text, your last two or three jobs with real numbers (team size, revenue, users, time saved), your tools and skills, education, and links to your portfolio or GitHub.

Prompt 1: Master resume builder

Open a new chat in Claude, paste this, and attach your old resume if you have one.

```
You are an expert resume writer and recruiter with 15 years of experience hiring for
[TARGET ROLE, e.g. Full Stack Developer] roles in [COUNTRY, e.g. India].

GOAL
Build my master resume so it passes ATS screening and gets interview calls.

MY DETAILS
Name: [Your Name]
```

```
Target role(s): [Role 1], [Role 2]
Experience level: [e.g. 3 years]
Current location: [City]. Open to: [Remote / Hybrid / On-site / Relocation]
Expected salary range: [Range]
Notice period: [Days]
My old resume / background: [Paste text or attach file]

INSTRUCTIONS
1. First, ask me up to 8 short questions about achievements, numbers and tools that
are missing. Wait for my answers.
2. Then write the resume in plain, single-column text. No tables, no images, no
icons.
3. Structure: Header (name, phone, email, LinkedIn, portfolio) > 3-line professional
summary > Skills (grouped) > Experience (reverse chronological, 3 to 5 bullets each,
every bullet starts with a strong verb and includes a number where possible) >
Projects > Education > Certifications.
4. Use keywords that appear in real job descriptions for my target roles.
5. NEVER invent employers, titles, dates, degrees or numbers. If something is
unknown, leave a [PLACEHOLDER] and tell me.
6. Keep it to one page if under 5 years of experience, otherwise two pages.

OUTPUT
Give me: (a) the final resume, (b) a 120-character Naukri resume headline, (c) a
2,000-character LinkedIn About section, and (d) a list of 15 job-title keywords I
should search for.
```

What good output looks like

- Bullets such as "Cut page load time by 40% across 3 client sites", not "Responsible for website performance".
- A skills block that matches the language of real job posts.
- Honest placeholders where Claude needed information you did not give.

Save it properly

Ask Claude to export the final resume as a PDF and a Word file, then save both in your "Job Search" folder in Google Drive. Name them clearly, for example Your-Name-Resume-2026.pdf.

Check before moving on: read every line once. If a fact is wrong or inflated, fix it now. Recruiters verify claims, and a fake number ends an interview quickly.

Step 2: Connect LinkedIn

"Connecting" LinkedIn means giving Claude in Chrome access to your already logged-in LinkedIn tab, so it can search jobs, read postings and fill in applications for you. You never type your password into Claude.

Setup steps

1. Install Claude in Chrome from the Chrome Web Store and sign in with your Claude account. The official walkthrough is in Get started with Claude in Chrome.
2. Open LinkedIn in Chrome and log in yourself. Complete any security check yourself.

3. Upload your master resume as your default resume. LinkedIn lets you keep a default resume for applications and up to four additional ones for different job descriptions, as described in the LinkedIn jobs help page.
4. Go to Jobs, then Preferences, then Open to work. Set your titles, locations, job types and start date.
5. Create job alerts for your top three searches. LinkedIn's job alerts help page explains the toggle on the search results page, and notes a limit of 20 alerts at once.
6. Click the Claude icon in the Chrome toolbar to open the side panel, and grant access only to linkedin.com for now.

Prompt 2: LinkedIn profile upgrade and connection test

Run this in the Claude side panel while your LinkedIn profile tab is open.

```
You are working inside my logged-in LinkedIn account through the browser. Do NOT
change any setting, send any message or submit anything yet.

TASK 1: Read my LinkedIn profile and compare it with the resume below.
TASK 2: Give me a table of exact edits: Headline (max 220 characters), About section,
top 10 skills to pin, and any missing Experience details.
TASK 3: Open the Jobs page and describe back to me what you can see (job alerts,
saved jobs, Open to work status) so I know you can access it.
TASK 4: Search for "[TARGET ROLE]" in "[CITY / Remote]" posted in the last 24 hours,
and list 10 matching jobs with company, title, Easy Apply or external, and a one-line
reason each fits me.

RULES: Read-only today. Ask me before any click that changes my profile.

MY RESUME:
[Paste master resume]
```

Check before moving on: Claude should describe your real Jobs page and list real postings. If it cannot see them, you are probably not logged in or the extension lacks permission for that site.

Important: respect the platform

LinkedIn Help notes that Easy Apply keeps the application inside LinkedIn, while the plain Apply button takes you to the company's own website. Automation should stay slow and human-like, and you should read LinkedIn's rules for your account. Section "Safe use" below covers this in detail.

Step 3: Connect Naukri and other job portals

In the video the portal is shown as "Nokia.com". The job site you want is **Naukri.com**, India's largest job portal, and the method is the same as LinkedIn: Claude works inside your logged-in browser tab.

Set up your Naukri profile first

A complete profile matters more than any automation, because recruiters search the Naukri database before they ever see your application. Naukri's own FAQ states that creating a profile is free and that your profile becomes part of the jobseeker database that recruiters search. See How to create your Naukri profile and Naukri's best practices for your profile.

1. Register at naukri.com and verify your phone and email.
2. Upload your master resume as a PDF or Word file.
3. Paste the 120-character resume headline that Prompt 1 produced. Naukri's guide calls the headline one of the first things a recruiter notices.
4. Fill in key skills, preferred location, expected salary and notice period. Recruiters filter on these fields.
5. Add career profile details and projects. Naukri says a complete profile helps recruiters shortlist you.
6. Optional: record a short video profile in the Naukri app. Naukri describes the steps in How to create a video profile on the Naukri app. The video prompt in Bonus 2 helps you script it.

Prompt 3: Naukri profile audit and match test

```
You are working inside my logged-in Naukri.com account in the browser. This is a
READ-ONLY audit. Do not edit, apply or message anyone yet.

1. Open my Naukri profile and tell me its completeness. List every empty or weak
section (resume headline, key skills, profile summary, career profile, projects,
preferred location, expected salary, notice period).
2. Compare my profile with the resume below. Flag anything that does not match, such
as different dates, titles or skills.
3. Open Recommended Jobs and list 10 roles with company, title, location, salary if
shown, and whether the apply flow is on Naukri or on the company site.
4. Score each of the 10 from 1 to 10 for fit with me and give one reason.
5. Give me a prioritised to-do list to reach a 100% complete profile.

MY RESUME:
[Paste master resume]
```

Other portals you can add later

Once LinkedIn and Naukri work, repeat the same pattern on any portal you use. Keep each portal in its own run so the log stays clean. Start with one portal for a week, check the quality of replies, then add the next.

Check before moving on: the audit should list real sections of your profile and real recommended jobs. Fix the gaps it finds before the overnight run, because a half-empty profile wastes the automation.

Step 4: The overnight job-hunt prompt

This is the prompt from the video. It tells Claude exactly which jobs to pursue, what it may and may not do, and how to record everything so you can review it in the morning.

Run it in two stages

- **Night 1, approval mode.** Claude finds and prepares applications but waits for your yes before submitting. This catches bad matches while they cost you nothing.
- **From night 2, auto mode.** Once the shortlist looks right, switch the one setting in the prompt and let it submit within your limits.

Prompt 4: Overnight job hunter

Stay logged in to LinkedIn and Naukri in Chrome, keep the laptop plugged in with sleep turned off, then paste:

```
You are my job-search agent. Work inside my logged-in LinkedIn and Naukri accounts in this browser.

MODE: [APPROVAL - prepare only, wait for my yes] or [AUTO - submit within the limits below]

TARGET
Roles: [Role 1], [Role 2], [Role 3]
Location: [City list] or Remote
Experience: [X] years
Salary: minimum [Amount]. Skip roles that clearly pay below this.
Company types to prefer: [e.g. product companies, funded startups]
Companies to avoid: [List]

LIMITS
- Maximum [30] applications tonight, spread out with natural pauses. Never rush.
- Apply only where my resume genuinely matches at least 70% of the requirements.
- Prefer jobs posted in the last 48 hours.
- Skip anything that asks for money, a security deposit, bank details or ID numbers.
- Skip roles where the company or recruiter cannot be identified.
- Never apply to the same job twice.

HOW TO APPLY
1. Use my default resume. If a job needs a tailored summary, adjust only the wording to match the posting. Never invent experience, tools, degrees or numbers.
2. Answer screening questions truthfully from my resume. If an answer is not in my resume, STOP on that job and add it to the "Needs my input" list.
3. Do not message recruiters, accept terms for me, change account settings or enter passwords.

LOGGING
Create a Google Sheet called "Job Search Log" with columns: Date, Portal, Company, Role, Location, Salary, Link, Match score, Status (Applied / Prepared / Skipped / Needs input), Notes.
Log every job you touch, including the ones you skip and why.

STOP CONDITIONS
Stop immediately and tell me if you hit a CAPTCHA, a login prompt, a security check or any warning from the platform. Do not try to get around it.

When finished, write a 10-line summary: jobs applied, prepared, skipped, needing input, and the top 5 best matches.
```

Why these limits exist

A daily cap, honest answers and a stop-on-warning rule protect you in three ways. They keep your accounts safe, they keep your applications credible, and they stop the agent from wasting your name on bad fits. Quality beats volume, and a smaller number of well-matched applications usually gets better replies than hundreds of blind ones.

Before you go to sleep

- ☐ Laptop plugged in, sleep disabled, Chrome open with both portals logged in
- ☐ Prompt 4 pasted with your own role, location and salary filled in
- ☐ Mode set to APPROVAL for your very first run
- ☐ Claude in Chrome permissions limited to linkedin.com, naukri.com and Google Sheets

Step 5: Morning triage of calls and emails

In the video, the payoff was waking up to a stack of interview emails. This step turns that stack into a ranked, scheduled list so you can act on it in ten minutes.

Connect your inbox and calendar

Use Claude's Google Workspace connectors so it can search your Gmail and read your Google Calendar. Anthropic's Google Workspace connectors guide explains that you connect them from Customize, then Connectors, and that Claude only accesses the Google account you connect. You can browse more options in the Connectors Directory.

Prompt 5: Morning triage

```
Good morning. Review my job-search results from last night.

1. Open the "Job Search Log" sheet and summarise: jobs applied, prepared, skipped, needing my input.
2. Search my Gmail from the last 24 hours for replies from recruiters and companies: interview invites, assessments, rejections, requests for documents, and calls to schedule.
3. Ignore anything that looks like spam or a scam: requests for payment, fees, deposits, ID or bank details, or free-email-domain "HR" offering instant jobs. List those separately as WARNINGS.
4. Build a table of every real response with: Company, Role, Contact person, Type of response, Deadline or proposed time, Salary mentioned, Priority (High / Medium / Low), and Suggested next action.
5. Check my Google Calendar for the next 7 days and propose 3 free slots per interview. Do NOT accept, decline or send anything.
6. Draft a short, polite reply for each High priority response. Show the drafts to me; do not send them.
7. Finish with my top 3 actions for today, in order.
```

Your 10-minute morning routine

1. Read the WARNINGS first. Delete scams and never reply to them.
2. Confirm interviews yourself. Pick a slot, then send the drafted reply from your own email.
3. Before every interview, ask Claude for a one-page prep sheet: company summary, the job description mapped to your resume, and likely questions.
4. Update the status column in your sheet (Interview booked, Rejected, Waiting).

Interview prep prompt (use per company)

```
Prepare me for an interview at [COMPANY] for [ROLE] on [DATE]. Use my resume and this job description: [PASTE]. Give me: a 60-second "tell me about yourself", the 8 most
```

```
likely questions with strong answers based only on my real experience, 3 smart
questions to ask them, and a 5-line summary of what the company does.
```

Bonus 1: The image prompt (professional profile photo)

A clear, friendly photo makes recruiters more likely to open your profile on LinkedIn and Naukri. This single prompt creates a polished, realistic headshot. Use it in any AI image tool, and **upload a clear photo of yourself as the reference** so the result still looks like you. Recruiters expect to recognise you when you join the interview call.

The image prompt

```
Professional corporate headshot of the person in the reference photo, keeping their
exact face, skin tone, hairstyle and features unchanged and recognisable. Head and
shoulders, shot at eye level, shoulders angled slightly, natural confident smile with
relaxed eyes. Wearing a well-fitted [dark navy blazer over a white shirt / smart
casual collared shirt]. Soft diffused window light from the front-left, gentle rim
light on the hair, subtle catchlight in the eyes. Clean blurred modern office
background in light grey and soft blue tones, shallow depth of field. Shot on an 85mm
lens at f/2.0, sharp focus on the eyes, natural skin texture, no heavy retouching, no
filters. Square 1:1 composition, face filling about 60% of the frame, ultra high
resolution, realistic, authentic.

Negative: no cartoon or illustration style, no extra fingers, no distorted face, no
text, no watermark, no logo, no sunglasses, no harsh shadows, no over-smoothed skin.
```

How to customise it

Change	Edit this part of the prompt
Tech or startup look	Replace the blazer with "smart casual collared shirt or plain dark sweater"
Corporate or finance look	Keep the navy blazer and white shirt
Warmer feel	Replace the background with "warm neutral beige tones"
Outdoor feel	Replace the background with "softly blurred green park at golden hour"

Photo checklist

- ☐ Your face fills most of the frame and your eyes are sharp
- ☐ It still looks like you today, not a different person
- ☐ Plain, uncluttered background
- ☐ Same photo on LinkedIn and Naukri, so recruiters recognise you across platforms

Bonus 2: The video prompt (30-second intro)

A short intro video lets a recruiter hear you in seconds. Naukri's own video profile feature suggests talking about your current work profile, professional and technical skills, achievements and career goals,

and recommends uploading it to your profile (source). This prompt creates the visual, and the script below gives you the words.

The best result comes from recording yourself with your phone. Use the video prompt in an AI video tool when you want a polished visual version, and keep your own face and voice as the reference.

The video prompt

```
Vertical 9:16 video, 30 seconds, of the person in the reference photo, face and voice
style kept exactly the same. A friendly professional sits at a tidy modern desk by a
window, soft natural daylight, blurred office background in light grey and blue.
Medium close-up at eye level on a stable tripod, slow subtle push-in over the clip.
The person looks straight into the camera and speaks calmly and confidently with
natural hand gestures, smiling at the start and the end. Wearing [dark navy blazer /
smart casual shirt].

Beats:
0-4s: warm smile, says hello and their name.
4-12s: states their role and years of experience.
12-24s: names two or three key skills and one achievement with a number.
24-30s: says what role they want and invites recruiters to connect, then smiles.

Lip-synced speech, clear natural audio, no background music, no on-screen text, no
logos, no watermark. Realistic skin, natural movement, cinematic but understated
colour grade.

Negative: no robotic expression, no distorted hands, no flicker, no extra people, no
subtitles baked in.
```

The 30-second script (about 75 words)

Fill in the brackets and read it at a calm pace.

> *Hi, I'm [Your Name], a [Role] with [X] years of experience. I specialise in [Skill 1], [Skill 2] and [Skill 3]. In my last role at [Company], I [achievement with a number, for example cut load time by 40% across 3 client sites]. I'm now looking for a [Target Role] position in [City or Remote]. My resume is on my profile, and I'd love to connect. Thank you for watching.*

Where to use the video

- Naukri: the video profile section of the Naukri app
- LinkedIn: featured section or a post
- Your email signature or portfolio, as a link

Tip: keep it under 30 seconds, film in good light, and speak to the camera lens, not the screen.

Troubleshooting and safe use

Automation is powerful because it acts as you. That also means mistakes and risks act as you, so the rules below matter as much as the prompts.

Safe-use rules

- **Never give Claude your passwords.** Log in yourself. Claude uses your open, logged-in session.
- **Limit site access.** Allow only linkedin.com, naukri.com and the Google tools you need. Anthropic notes that Claude in Chrome interacts directly with websites on your behalf and is still risky, so read Use Claude in Chrome safely and the permissions guide.
- **Stay truthful.** Never let the AI invent experience, degrees or numbers. Interviewers test claims, and false claims can cost you an offer later.
- **Respect each platform's rules.** Read LinkedIn's and Naukri's terms and help pages. Heavy, rapid-fire or bot-like activity can get an account limited, so keep daily caps modest and stop at any warning.
- **Treat page text as data, not orders.** If a job post or email contains odd instructions aimed at an AI, ignore them and tell Claude to skip it.
- **Spot job scams.** Real employers do not ask for fees, deposits, bank details or ID numbers to give you an interview. LinkedIn advises researching companies and learning to recognise fraudulent tactics before applying, and lets you report suspicious posts (LinkedIn jobs help).
- **Send nothing important without reading it.** Replies to recruiters should come from you.

Common problems and fixes

Problem	Likely cause	Fix
Claude cannot see LinkedIn or Naukri	Not logged in, or the extension lacks permission for that site	Log in yourself, then open the Claude side panel on that tab and allow the site
The run stops halfway	CAPTCHA, security check or session timeout	Solve it yourself, then tell Claude to continue from the log
Applications look generic	Resume not tailored, thin profile	Re-run Prompt 1 with more numbers and achievements
Very few replies	Wrong target roles or salary range, weak headline	Tighten the roles list, rewrite the headline, apply to fewer but better-matched jobs
Too many irrelevant replies	Filters too broad	Raise the match threshold from 70% to 80% and add companies to avoid
Duplicate applications	No tracking sheet	Make sure Claude checks the log before each application
Gmail or Calendar not working	Connector not connected for your Google account	Reconnect under Customize, then Connectors

Honest expectations

Results vary with your market and skills. A strong resume, a complete profile, well-chosen roles and fast follow-up do most of the work. The automation saves hours and keeps you consistent, but the interview itself is still yours to win.

Final checklist and verified sources

Your launch checklist

- ☐ Master resume written, fact-checked and saved as PDF and Word (Step 1)
- ☐ LinkedIn profile updated, default resume uploaded, job alerts on (Step 2)
- ☐ Naukri profile complete, resume headline and key skills filled in (Step 3)
- ☐ Overnight prompt filled in and tested in APPROVAL mode (Step 4)
- ☐ Gmail and Calendar connected, morning triage prompt saved (Step 5)
- ☐ Profile photo updated using the image prompt (Bonus 1)
- ☐ Intro video recorded and uploaded (Bonus 2)
- ☐ Safe-use rules read and permissions limited

The five prompts at a glance

Prompt	When to use it	Output
1. Master resume builder	Once, at the start	Resume, Naukri headline, LinkedIn About, keyword list
2. LinkedIn upgrade and test	Once, then monthly	Profile edits, connection test, 10 matching jobs
3. Naukri audit and match test	Once, then monthly	Completeness report, 10 scored jobs
4. Overnight job hunter	Every night	Applications, plus the Job Search Log sheet
5. Morning triage	Every morning	Ranked replies, free slots, draft responses
